The **Unrivalled Sound**
Absorption of SoundPly®
Acoustic Technology

A Collection
of **Authentic Wood**
Panel & Trim Designs.

SPCore™ Technology

U.S. Utility Patent 9,691,370

The layering and orientation of our core materials allows sound waves to penetrate deeply while maintaining the structural strength needed to span large distances without warping.

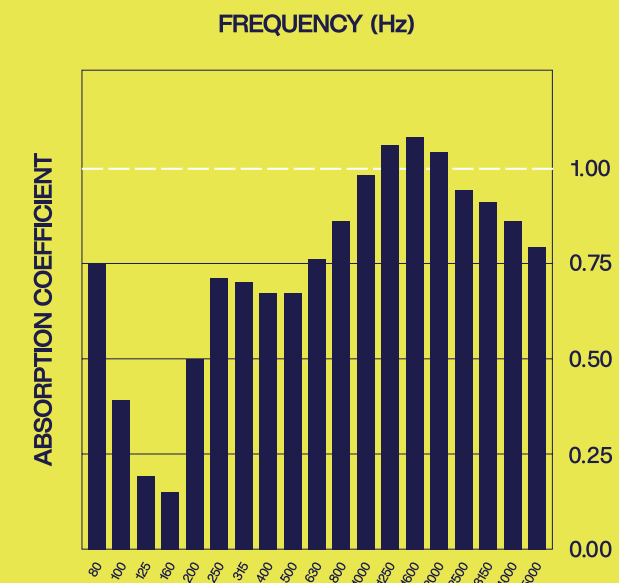

MicroPerfection® Technology

U.S. Utility Patent 11,043,198

The stability of our patented acoustic panel subsurface layer combined with our proprietary micro-perforation process results in unrivaled sound absorption.

SOUNDPLY®

Integrating unrivaled acoustic performance with the beauty of real wood.

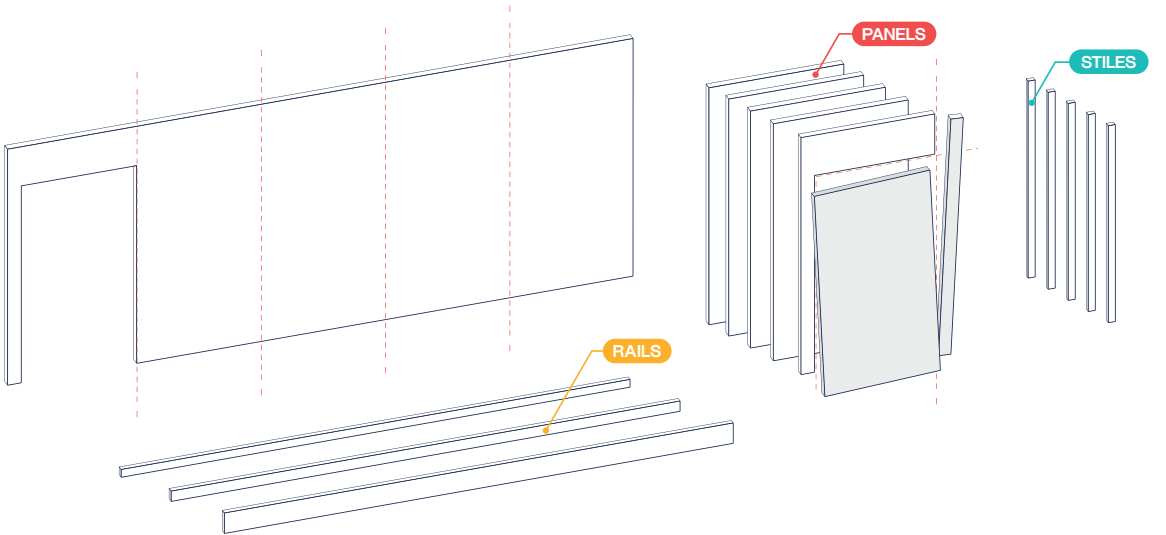

FreeStyle solutions utilize **SoundPly panels** which feature patented acoustic technology, providing unrivaled acoustic performance without requiring messy back-loading or intrusive cavity spaces.

SoundPly products' ability to eliminate both reflected and transmitted sound is unprecedented. They have the combination of unusually high NRC (sound absorption) and CAC (ceiling sound blocking).

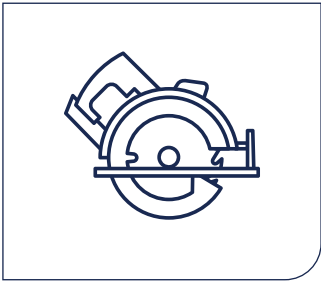

A Designed System

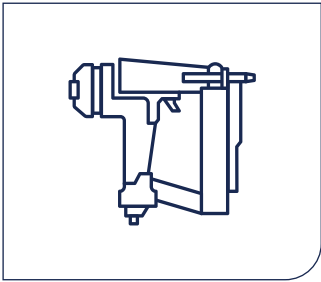

FreeStile is easily installed with standard tools. Measure, cut and assemble on site for a custom layout specific to your space.

Sustainability

Our journey towards sustainability is driven by the conscious choice of wood—the only major building material that is both renewable and sustainable.

Our deliberate avoidance of materials with environmental or ethical concerns underlines our dedication to making a global impact through local actions.
